- 5 Rolling bearing
- 6 Sliding plates
- 7 Rotary shaft lip-type seal
- 8 Plain bearing
- 9 Sealing of the housing
- 10 Drain port

Description

KM series high pressure gear motors are mainly used in oil-hydraulic plants. They are suitable both for hydraulic fluids as well as mineral oil bases (DIN 51524/25) and engine oils (DIN 51511). The housing components are made from high-grade cast iron, the shaft and gears from hardened and ground case-hardening steel. The shafts are supported in multi-layer bearings that have excellent antifriction properties. The seals in the drive shaft ends are made using solely NBR or FKM shaft seals. An outboard bearing is placed on the shaft end to handle radial and axial forces. The use of fine-meshed filters significantly increases the gear pump service life. Careful maintenance is the prerequisite.

Technical Notes:

1. External loads

The robust design facilitates handling external radial forces, depending on the size and direction of application.

2. Direction of rotation

Regarding the direction of rotation basically the following applies provided the view is directed toward the drive shaft end:

- Drive shaft end rotating clockwise: Oil flow from left to right
- Drive shaft end rotating anticlockwise: Oil flow from right to left

General Characteristics

Fixing type	Flange type
Pipe connection	Flange; Dimensions page 7
Drive shafts	Dimensions page 7
Direction of rotation	clockwise or anticlockwise
Weight	chart page 6
Mounting position	optional
Ambient temperature	$\vartheta_{u \min} = -20\text{ °C}$ $\vartheta_{u \max} = +60\text{ °C}$

Working Characteristics

Working pressure	
Inlet port	$p_{\max} =$ please see technical data
Outlet port	$p_{\max} = 40\text{ bar}$
Leakage oil back pressure	at 1000 1/min = 4.5 bar at 1800 1/min = 2.5 bar
Pressure fluid temperature	$\vartheta_{m \min} = -20\text{ °C}$ $\vartheta_{m \max} = +80\text{ °C}$ for NBR Lip-type shaft seal $+120\text{ °C}$ for FKM Lip-type shaft seal
Viscosity	$v_{\min} = 13\text{ mm}^2/\text{s}$ $v_{\max} = 600\text{ mm}^2/\text{s}$
Recommended viscosity range	$v = 16 \dots 90\text{ mm}^2/\text{s}$
Absorption capacity	chart page 4
Output power	chart page 4
Filter	Filter with filtration quotient $\beta_{60} \geq 75$
Pressure fluids	Mineral oil based on DIN 51524/25 Motor oil based on DIN 51511 flameproof pressure fluids on request

Accessories

Straight flange connection, hole pattern based on SAE standard.
