Description

I Construction

- 1 Housing
- 2 Measuring system (screw spindles)
- 3 Bearing (ball bearings)
- 4 Sensing wheel
- 5 Sensors
- 6 Plug
- 7 Measuring connection (pressure, temperature, etc.)

I Product characteristics

- High-precision measurements with excellent repeatability
- Pulsation-free measuring principle
- Maximal measurement resolution if used with encoder
- IO-Link technology available
- Wide measurement ranges with appropriate design sizes
- Application-optimised specification
- Very low pressure drop
- Any flow direction (see preferred direction of encoder versions)
- Wide temperature range
- High working pressure
- Very low noise
- Highly-dynamic measurements
- Explosion-proof versions ATEX/IECEx
- Electronics in EMV-compliant version
- RoHS-compliant

I Function

Two high-precision screw spindles (2) with rolling-element bearings (3) for low friction. The liquid flow makes the spindles rotate (displacement principle) and runs through the device in axial direction. Flow in and out takes place without hardly any deflection, which means the device only loses comparatively little pressure. The measuring principle does not cause any pressure or volume flow pulsation. Because there is no need for settling sections on the inlet and outlet side, machines/plants can be designed to be more compact. All moving parts are lubricated by the measuring medium.

The spindle-mounted sensing wheel is scanned by two contact-free sensors by default. The plug is equipped with a pre-amplifier that converts the sensor signal into a square-wave signal which serves as output signal. The dual-channel scanning facilitates a higher measuring resolution and detection of the direction of flow. Alternatively available encoder specifications deliver maximal measurement resolution.

I Approvals

	Description	Country
	EU compliance – EMV – Pressure equipment – RoHS	European Union
	EAC EMV guideline	Eurasian Economic Community
	GOST metrology, measurement technology	Russia
	IO-Link	International

Description

I Standard version

The standard versions come with an integrated pre-amplifier which converts the pulses from the magnetic sensors into square-wave signals which are then computed by an electronics into specific measurement values.

The optionally available remote-electronics version is designed to handle extreme temperature ranges.

I Encoder version with maximised measurement resolution

Compared with standard sensors, encoders are capable of generating considerably more pulses, thus increasing measurement resolution by orders of magnitude. Encoder-equipped SVC flow meters generate up to 2 500 pulses per revolution and can recognise the direction of flow.

Encoders, like the standard versions, send square-wave signals to the electronics.

I IO-Link version with internal calculation of measured values

SVC flow meters with IO-Link technology are based on standard SVCs with two sensors. Unlike the versions with pre-amplifier which always send a square-wave signal to the electronics, IO-Link devices have the added capability of internally computing concrete measurement values. Therefore, these flow meters lend themselves for use in classic PLC and in IO-Link infrastructures.

Please see page 12 for details.

Technical data

I General characteristics

Nominal sizes	4 · 10 · 40 · 100 · 250	
Type of connection	Pipe connection (R), SAE flange (S), DIN flange (D)	
Mounting position	Any	
Flow direction	Any	
Preferred direction of flow (only for encoder versions)	Large bearing > small bearing	
Typical measurement accuracy	+/- 0.2 % from 20 mm ² /s viscosity values	
Maximum pressure (standard versions)	SVC 10	250 bar
	SVC 40	250 bar
	SVC 100	140 bar
	SVC 250	40 bar
Maximum pressure (high-pressure versions)	SVC 4	480 bar
	SVC 10	480 bar
	SVC 40	480 bar
Maximum permissible pressure loss	Temporary	25 bar
	Permanent	7 bar (at 50 % of max. flow rate)
	SVC 100 (ATEX version)	10 bar
Ambient temperature	-40 ... 150 °C	
Media temperature	-40 ... 210 °C	
Viscosity	... 2 500 000 mm ² /s (depending on flow)	
Sound pressure level	... 52 dB(A)	

I Accuracy characteristics

- The indicated measurement accuracy refers to the pulse volume, i.e. the percentage variance applies to the latest measurement value.
- The measurement accuracy is up to +/- 0.2 % of the measured value by default.
- Repeatability is +/- 0.05 % in stable conditions.
- The measurement accuracy tests performed can be traced to DAkkS (Deutsche Akkreditierungsstelle, German Accreditation Body).
- The measurement accuracy characteristics indicated by KRACHT is confirmed by DAkkS.
- A calibration is possible on request. The result of this calibration will be documented in the form of a measurement accuracy characteristic.

Typical measurement accuracy characteristic

I Signal characteristics (standard, high-temperature, encoder, IO-Link versions in SIO mode)

The pre-amplifier generated square-wave signal enables application specific resolutions. Standard resolution means that the electronics will process one pulse from a channel/sensor per cycle time (rising signal edge in channel I). In contrast, the 4-fold evaluation uses the maximal pulse rate per cycle time, allowing for a resolution that is four times as high as in the standard evaluation. All characteristics of the signal (rising and falling signal edge of both sensors/channels) are exploited in the evaluation.

Electronics

I Standard versions electrical characteristics

Number of measuring channels	1 or 2
Working voltage U_B	24 V +/- 20 % or 12 V +/- 20 % for versions with reduced supply voltage
Pulse amplitude U_A	$\geq 0.8 U_B$
Pulse with symmetric output signal	Square duty factor/channel 1:1 +/- 15 %
Signal output	PNP / NPN
Pulse offset between the two channels	90 ° +/- 30 °
Power requirement $P_{b \max}$	0.9 W
Output power / channel $P_a \max$	0.3 W short circuit-protected
Protection rating	IP 65

I Encoder versions electrical characteristics

Number of measuring channels	2
Working voltage U_B	11 ... 30 V
Pulse amplitude U_A	$\text{Min}_{\text{High}} \geq U_B - 3 \text{ V}$ $\text{Max}_{\text{Low}} \leq 2,5 \text{ V}$
Pulse shape with symmetric output signal	Square , Duty factor/channel 1:1 +/- 15 %
Signal output	Push-Pull
Pulse offset between both channels	90 ° +/- 30 °
Maximum load	+/- 30 mA
Power consumption	Standard 45 mA Maximum 150 mA
Protection rating	IP 65

I IO-Link versions electrical characteristics

	IO-Link mode	SIO mode
Number of measuring channels	1 or 2	
Working voltage U_B	10 ... 30 V	
Pulse amplitude U_A	$\text{Min}_{\text{High}} \geq U_B - 2 \text{ V}$ $\text{Max}_{\text{Low}} \leq 2 \text{ V}$	
Pulse shape with symmetric output signal	-	Square duty factor/channel 1:1 +/- 15%
Signal output	active pull +/- 200 mA	
Pulse offset between the two channels	-	90 ° +/- 30 °
Power requirement $P_{b \max}$	1 W	
Protection rating	IP 65	

Electronics

I IO-Link general

Thanks to its international standardisation (IEC 61131-9), the IO-Link technology offers a point-to-point connectivity with continuous monitoring between any desired control layer and the SVC-IO-Link assembly. Handling and startup is made easy by the associated IODD file (IO Device Description) strongly simplified

The SVC-IO-Link assembly directly delivers all measured values with units. In the preset SIO mode (standard input output), the volume counter gives square-wave signals if the IO-Link mode is not enabled by an IO-Link master. This guarantees downward compatibility of the SVC-IO-Link assembly with the standard square-wave signal (see page 10).

I IO-Link connection plug

	IO-Link mode	SIO mode
L1 green	Flashing at 1/s	Continuous light, ready for operation
L2 red	Channel 1	gear detected = LED on gear not detected = LED off
L3 red	Channel 2	gear detected = LED on gear not detected = LED off

I IO-Link characteristics

Name	SVC
Manufacturer ID	0x0524

Name of manufacturer	Kracht GmbH
IO-Link connection plug	V1.1
Bit rate	COM3 / 230.4 kbit/s
Minimum cycle time	500µs
SIO mode supported	Yes
Use of indexed service data (IS DU)	Yes
Data storage (DS) possible	Yes

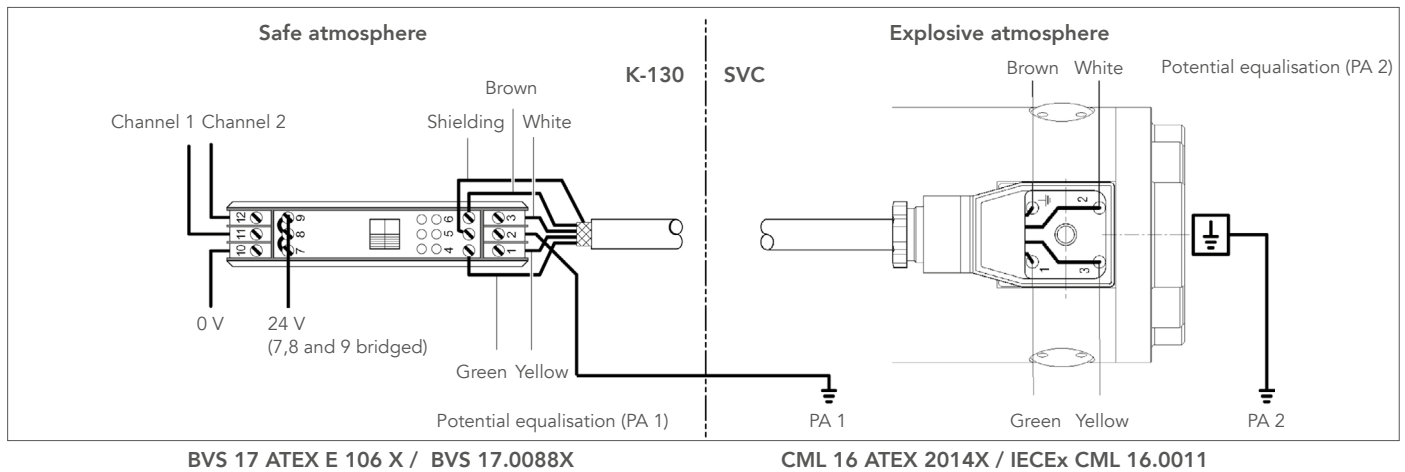

I Communication of the IO-Link assembly

Explosion-proof version (ATEX/IECEX)

I Function

- All screw type flow meters are available as explosion-proof versions according to ATEX and IECEx certification.
- The explosion-proof version consists of the flow meter (intrinsically safe electric gear) and the switching amplifier K 130 (accessory electric gear). This layout meets the ignition protection type "intrinsic safety".
- The flow meter is installed in the explosive atmosphere.
- The switching amplifier K 130 is assembled in the safe atmosphere.
- The flow meter is electrically connected with the switching amplifier. The switching amplifier analyses the sensor signals coming from the flow meter and converts them into square-wave signals.
- It is prohibited to deploy the flow meter in explosive atmospheres without switching amplifier.
- The cable between the flow meter and switching amplifier may be up to 400 m long.
- The switching amplifier features LEDs to monitor for line breakage / short circuit, channel switching state, and voltage supply.

Notes

This drawing only serves as an example for the connection of the sensors to the isolating switching amplifier K 130. Observe the applicable standards when assembling a plant in an explosive atmosphere.
